---

A "Fast & Focused" Search is completed in 2-3 hours (maximum). The search must be on a very specific topic and meet certain criteria. The criteria are posted in EIC3600 and on the EIC3600 NPL Web Page at http://ptoweb/patents/stic/stic-tc3600.htm.

---

What is the topic, novelty, motivation, utility, or other specific details defining the desired focus of this search? Please include the concepts, synonyms, keywords, acronyms, definitions, strategies, and anything else that helps to describe the topic. Please attach a copy of the abstract, background, brief summary, pertinent claims and any citations of relevant art you have found.

(see Figs. 7,8,9, attached)

G06f-9/17?
" -007?

Computerized purchase/requisition system with a list of "commodity codes" with descriptions, for various things being purchased by a company, and a list of ~~account~~ "general ledger" "account codes", with descriptions (each code being for a category of expenses) and a "mapping"/"map" between the two, such that someone can look up a commodity code to see which account codes are valid, and make a decision about which code shou be billed for the ___ item being purchased/requisitione (Also, see abstract & claims, attached.) (Closest U.S. at 5,758,327-Go

## EIC 3600

Questions about the scope or the results of the search? Contact **the EIC searcher or contact**:

**Karen Lehman, EIC 3600 Team Leader**
**(571) 272-3496 Knox 4B68**

## Voluntary Results Feedback Form

➢ *I am an examiner in Workgroup:* [　　　　] *Example: 3620 (optional)*

➢ *Relevant prior art found, search results used as follows:*

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

*Types of relevant prior art found:*

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature
  (journal articles, conference proceedings, new product announcements etc.)

➢ *Relevant prior art not found:*

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

**Comments:**

**Drop off or send completed forms to EIC3600 Knox 4B68**

Detailed Description
... the PCT Gazette.

  Workers' Compensation Information Processing System
  Background of the Invention
  The present invention **relates** to Workers' Compensation information
  processing systems.

  Workers' compensation is a class of insurance mandated by...

...claim number is the payer's key identifier for file management, work

flow routing, document **matching** , data capture and payment transactions.
In order to receive prompt payment, a medical provider must...

...Fifty percent of this number, or twenty-five percent of the total,
typically do not **match** any injury within the payer's claim system.
Bills lacking claim numbers cause a great...
...medical treatment of an
injured worker is delayed because a claim number has not been **matched**
to the medical bill or report, the report of injury by the employer,
prompted by...

Claim
... Workers' Compensation claims verification system is constructed to
receive the data and determine therefrom any **matching** claim number.
Another embodiment of the present invention concerns a Workers'
Compensation medical treatment reporting...

...which is given a unique identifier, to be transmitted to receiving
software. This software
then **matches** the bill and the attachment for further processing.

4 Report Triage System: The business system...

...PCT/US01/05138
In a preferred embodiment, a number of different providers (not shown)
are **connected** to the Workers' Compensation claim verification system
44. The WO 01/61608 PCT/USOI/05138...systems that electronically send
attachment files have the disadvantage that it can be difficult to **match**
the attachments with the bill. For example, consider the case of an
X-Ray or...

...allow for the mailing of the attachment to the payer if there is no
electronic **connection** made with a given payer. The type-of-document
field helps the receiving software route...adapted to receive the at
least some of the data and to determine therefrom any **matching** workers'
compensation claim number, if there is a **matching** workers' compensation
claim number, the workers' compensation claims verification system is
adapted to electronically supply the **matching** workers' compensation
claim number to the provider computer, if there is no **matching** workers'
compensation claim number, the workers' compensation claims verification
system is adapted to produce an...having a provider computer containing
Workers' Compensation software, each of the provider computers being
operably **connected** to the Workers' Compensation claim verification
system across the Internet.

8 The system of Claim...

...verification system is adapted to receive claim numbers from any number
of payer computers and **match** the payer claim numbers with claim
verification requests received by the database from any number...

...least one of the additional fields indicating information that allows
the attachment file to be **matched** to a bill
without requiring the attachment file to be opened, and
receiving software that...delivery, linking and tracking.

45 A workers' compensation system including:
an injury report system operably **connected** between a provider computer
system and payer computer system, the injury report system allowing for
...

...injury medical reports to the payer computer system;
a workers' compensation claims verification system operably **connected**
between a provider computer and a server, the workers' compensation
claims
verification system allowing an electronic determination of a workers'
compensation number;
a bill submission system at the server operably **connected** to
electronically
receive bills from a provider computer system; and
a payment status system operably **connected** between provider computer
system and a payer computer system allowing the status of the submitted
...

...computer system.
50 The system of Claim 45, further comprising an automated reporting
system operably **connected** between a payer computer system and an
employer computer system, the automated reporting system allowing...

...bills
to the recipient computer system; and
4 payment status system on the server operably **connected** between the
multiple provider computer systems and multiple payer computer systems,
the payment status systems...

...ABSTRACT the product and information relating to the consumer of the
product is received. It is **determined** whether the identifier is **valid**
. If the identifier is valid, the registration information is stored. An
access code identifying the stored registration information is
transmitted as is product information **relating** to the **product**
identified by the **identifier** . A warranty for the **product** identified
by the **identifier** may be registered. The registration information may
further include a financial **account** **number** and an extended warranty
for the **product** identified by the **identifier** may be registered a
financial account specified by the financial **account** **number** may be
charged for the extended warranty. The financial account may be charged
periodically. The...

...the identifier of the product is retrieved using the access code and
current product information **relating** to the **product** identified by the
**identifier** is transmitted. The access code may be received
periodically. The registration information may further include a
financial **account** **number** and a financial **account** specified by the

financial account number may be charged for transmission of the current
product...

...SPECIFICATION the product and information relating to the consumer of
the product is received. It is **determined** whether the identifier is
**valid** . If the identifier is valid, the registration information is
stored. An access code identifying the stored registration information is
transmitted as is product information **relating** to the **product**
identified by the **identifier** . A warranty for the **product** identified
by the **identifier** may be registered.
   The registration information may further include a financial **account**
**number** , and an extended warranty for the **product** identified by the
**identifier** may be registered, and a financial account specified by the
financial **account** **number** may be charged for the extended warranty.
The financial account may be charged periodically.
   The...

    ...Abstract:  the  Jini  environment makes heavy use of Java's ability to
move  objects,  including  each  **object**  's data and  **code** , from one Java
environment  to another. The Java environment, with its portable bytecodes,
dynamic  loading,  **code**   **verification** , and security **allows** such an
approach  straightforwardly.  The  author  discusses  its  core  services,
discovery protocol, device **connection** and system enhancement.

...engagement of encryption," which includes the development, production,
holding, use, import, transportation, distribution, sale, or **purchase** of
encryption means, methods, **keys** , or any other **object   related** to
encryption.

Under this order, encryption requires a permit--spelling out specific terms
and conditions--from  an official appointed by the Minister of Defense. The
official has wide discretion in **determining** whether to issue a **permit** .
The permit must be renewed annually.

A 1986 import order requires those wishing to import...

...ABSTRACT:  preprocessor is the C preprocessor (cpp) included in all C
environments. Other types of preprocessors **check** file accuracy, translate
macro languages, modify source programs for profiling, place error-
**checking** code inline or translate between languages. Postprocessors modify
code after compilation and sometimes even after...

...particular programming language or application area and may restructure
loop constructs for greater efficiency or **match** them to optimized library
routines. **Object - code** postprocessors are usually not
application-specific but are tied to a particular platform. They can
perform **branch** optimization and reorder **code** to reduce cache
contention.
